

I Want to Create a Tour & Travel web application using PHP and MySQL (Create Database "Travel"). Need advance level Front Page and Tour Single Pages with Complete Itinerary (Day 1, Day 2 wise), Also Complete Package Displaying with Booking Function. Frontpage Needs a Proper Search option where Users can Search Places and Tour Packages. I want a Very Good Quality Admin Panel & User Panel with Best CSS+JAVASCRIPT+ HTML. All Layout and Functions are must Responsible in All Devices.

After Login Admin Panel:

- **Dashboard:** In the Section admin can see all, Today's Bookings, Total Tour Packages, Active Tour Packages, etc & More in Boxes also Admin See all Recent Activities.
- **Bookings:** In the section admin can all Bookings also Enquiries.
- **Tour Packages Management :**
 - **Place:** in the submenu section admin can Create New Places with Images, If Featured then the The place shows in the front pages, also edit and remove.
 - **Packages :** in the submenu section admin can create new Tour Packages with multiple Images, Price Person, Offer Price, and Itinerary & Minimum People, Start Date, Add Featured option. Also Admin can Edit and Remove the Package.
- **Transactions:** in the section admin see all Transactions, also Print or Download in PDF.
- **User Management:** in the section admin see all registered users, also manage any individual Users.
- **Settings:** in the section admin see all Settings, (Webmaster Tools, Logo Change, Front pages Slider in Hero Section, Payment gateways (Razorpay, Phonepe, Cash) SMTP with Test Email, Email Templates (Edit and Preview), Invoice Settings, Currency & Time Settings, WhatsApp Number (Here Seated Number is show in front page Floating Button) Password Change)

After Login User Panel:

- **Dashboard :** In the Section Users can See All shortcuts of "Recent Bookings" and all Functions Shortcuts in Boxes.
- **Bookings:** In the Section Users can See All Bookings Information.
- **Transactions :** In the Section Users can See All Transactions and download Invoices in PDF.
- **Settings:** In the Section Users can Change his Name, Address, Mobile, Email and Profile Image

Note : In the project Frontend Look Must organised and Good Looking Responsive all UI/UX, use must be advanced CSS+JAVASCRIPT+HTML. All Fonts and Images collected world class from the internet, I will change in future. Add all Pages with demo data.
